COMMITTED... participants at the joint paint school for valued customers.

## Place where it's not just a coat of paint

UNIFORCE Engineering and Industrial Coating Services and its subsidiary, Marintec Sdn Bhd, a highly-reputed professional applicator and supplier of protective coatings for Marine and Protective Industry, believe customer satisfaction is above everything else.

To further establish this fact, the company jointly organised a paint seminar with its main business associate Jotun (M) Sdn Bhd at Sunway Hotel Seberang Prai last year.

The participants were from the Royal Malaysian Navy, Marine Police, Fisheries Department, Marine Department, Inventory Department including shipbuilders, ship owners, yachtmen, shipping agents, plant managers, maintenance engineers, and technicians from the northern region.

Aptly themed, "Moving Together To Meet Customers Satisfaction" the day-long seminar was held in-conjunction with Uniforce's 10th anniversary celebrations.

"Many people have the general feeling that painting is a layman's job but to us it is more than just selling paints per se.

"Top on our priority list apart from recommending a compatible paint system to suit customer needs, is the safety of our applicators," says general manager Marvynn Gan.

He says the company emphasises on safety first by using a total scaffolding structure around the objects painted to ensure a safe working environment for workers.

Besides, this enhances the quality of painting as the applicators would be able to reach every nook and corner of the object without leaving any "painting holiday," added Gan.

The company often organises in-house training for its own applicators, conducted by trainers from Jotun's Technical Department to disseminate knowledge on the right painting approach.

Uniforce is presently working hand-in-hand with Jotun (M) Sdn Bhd, which has been awarded the prestigious ISO 9001 certification from Sirim Malaysia.

To qualify as an approved applicator of Jotun, Uniforce has to meet the minimum quality standards to comply with the ISO 9001 standards. Therefore, doubts on the quality standards observed at Uniforce do not arise.

"We have vast experience and necessary qualifications in grit blasting, corrosion control, concrete repair and general maintenance works.

"Among our main market for corrosion protection (blasting and coatings) include the marine, petro-chemical industry, food industry, electronic industry, container market besides yachtmen," says Gan.

Jotun's protective and high performance paint system, he adds are suitable for various substrates such as wood on boats, aluminium on crafts, GRP (fibre-glass) on boats, cooling towers and tanks, steel on ships,

Gan... wise words for participants at the seminar.

barques and storage tanks, stainless steel on vessels besides pumps and valves made of cast iron and concrete flooring for floor-coating, maintenance painting for rooftops, chimneys, structural steel, buildings and water-proofing products.

The Norwegian-based Jotun, a worldwide leading paint technologist, has networks in well over 40 countries from Norway to New Zealand, the United Kingdom to the United States, Spain to South East Asia.

Apart from technical advice and specifications on the best painting system, Gan says the teamforce at Uniforce would usually conduct a corrosion survey first before submitting a report to potential clients.

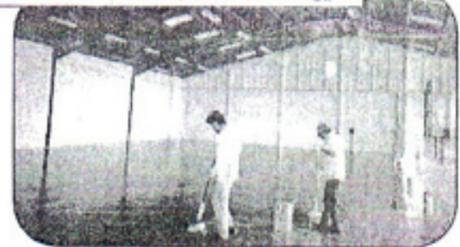

Uniforce also supplies adhesive bonding systems such as the Sikaflex 221 from the United States and General Electric (GE) silicone sealants for the construction industry and factories.

The adhesive bond agents, he says are ideal for vehicle windscreen as they have good bonding strength over high speed movement of the vehicles.

Other business associates of Uniforce include Corroless (M) Sdn Bhd, Sika Kimia (M) Sdn Bhd and Asia Radio (M) Sdn Bhd.

### Jotun Protective Coating for Production Room (Floor Coating)

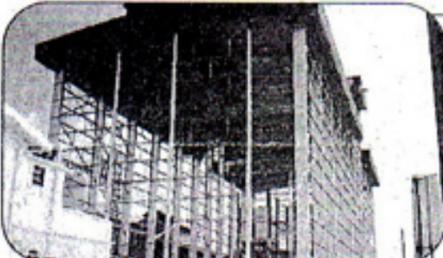

**Maintenance Coating for GRP Substrate**  
For details specification  
Surface Preparation  
a) To degrease and wash down to remove all surface contaminants  
b) Manual sand down to remove all stubborn stains  
c) Wash down to remove all sanding debris  
d) Ensure it is clean and dry prior to application  
e) Applied Jotamastic 87 White 000  
f) Applied Hardtop As Yellow 2 / Grey 38

### Rig Up of Scaffolding 3S STRATEGY - SAFETY • STABLE • SAVE

### Repainting of Rooftop

**Problem** - Corrosion was widespread due to plating process of acid fumes  
**Surface Preparation** - Power Tool clean the entire rooftop  
**Protected** - Wash down to remove all surface contamination  
- Applied 1 coat Jotun Jotamastic 87 Grey 38  
- Applied 1 coat Jotun - Penguard HB Pearl Grey  
- Applied 1 coat Jotun - Hardtop As Pearl Grey

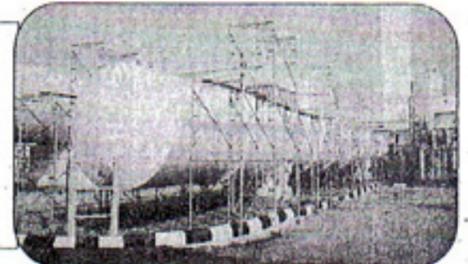

### Repainting of Structural Steel

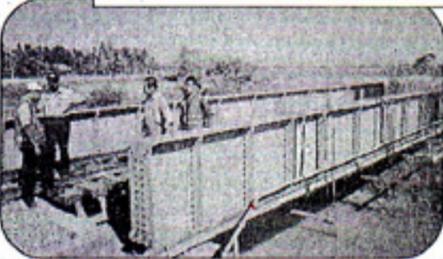

**Jotun Paint Specification - 4 coats system**  
Surface Preparation - Power Tool Clean  
Coating System  
- Applied 1 coat Jotun - Cromoprimer 50  
- Applied 1 coat Jotun - Pilot II MIO 50  
- Applied 2 coats Jotun - Pilot II Aluminium 2 X35  
- Rec. Thinner No. 2

**Jotun Protective Coating for Industrial Gas Supplier & Chimney Exhaust**  
Maintenance painting programme carried out for the industrial gas supplier

### Jotun Protective Coating for Railway Bridge

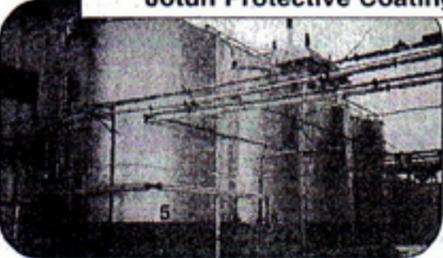

Grit blasting carried out for railway bridge and protected with Jotun Paints

Grit blasting carried out and preserved with Jotun Protective Coating for internal storage tank for carriage of water, palm oil, latex, petroleum, molasses and etc.

### Jotun Protective Coating for Tank Farm & facial Rooftop

Refurbishment of external painting for tank farms protected with Jotun Paints

Repainting of facial rooftop protected with Jotun Protective Coating
